Global Alerts – East Zone

MALAYSIA HEAVY RAINFALL & FLOOD RISK WARNING

Affected Areas

Western Sarawak (Malaysia) including Kuching, Lundu, Sambas, Singkawang, Bengkayang, Telitton, and surrounding districts.

Duration

Short-term flash-flood risk: 6–12 hours after peak rainfall

Medium-term heightened flood risk: 1–2 days

Hazard Types

Heavy Rainfall/Flooding

Current Situation & Hazard Summary

The map indicates extremely intense rainfall centered around the Kuching–Lundu region, shown by deep purple and pink shades. These colors represent very high precipitation rates, significantly increasing the risk of: Flash floods, River overflow, Landslides in hilly areas, Urban flooding in low-lying neighbourhoods, Transport disruptions. Wind streaks across the map suggest active weather movement, meaning conditions may continue or worsen. Minor flooding is ongoing in the rivers.
